Alev Yılmaz (CAKUT/UTI/Bladder Dysfunction WG)

Urinary Tract Infection and Levels of heat shock protein 70 In children as a Sensitive marker for Excluding other infections (UTILISE)

Our study UTILISE will be finished in a few months. Serum and urine samples from total 862 patients and healthy children were collected. 272 Of the patients were excluded because they did not fit the inclusion criteria. Serum and urine HSP70 levels were measured in these samples, statistical analyses are still going on. Our lab works on the other biomarkers now. We are very excited for the results. We planned multiple publications as soon as we got the results.
